# The difference between solar energy storage panels and power generation panels

What is the difference between solar and battery storage?

In contrast, solar with battery storage empowers you to use stored energy during outages or low sunlight conditions. For instance, a solar system with batteries allows you to power essential appliances even when the grid is offline. This level of reliability provides peace of mind and optimizes energy usage throughout the day and night.

### What is a solar-plus-storage system?

A solar-plus-storage system is a residential solar energy system paired with battery storage. This type of system provides power regardless of the weather or the time of day, without relying on backup power from the power grid.

### What is energy storage?

Energy storage is a system that can help more effectively integrate solar into the energy landscape. Sometimes it is co-located with, or placed next to, a solar energy system, and sometimes it stands alone.

### Why is solar storage important?

Solar storage is important because it allows solar energy to contribute to the electricity supply even when the sun isn't shining. It also helps smooth out variations in solar energy flow on the grid, which are caused by changes in sunlight shining onto photovoltaic (PV) panels or concentrating solar-thermal power (CSP) systems.

### What is solar battery storage?

Solar battery storage enhances your energy independence by storing excess energy produced by your solar panels. This stored energy can be used during high-demand periods or when sunlight isn't available, such as during cloudy days or at night. Solar batteries store energy generated by solar panels through a charging process.

### Can solar energy be combined with solar photovoltaic?

The AES Lawai Solar Project in Kauai, Hawaii demonstrates that solar photovoltaic systems can be combined with energy storage. It has a 100 megawatt-hour battery energy storage system paired with a solar PV system. Coupling solar energy and storage technologies is beneficial because solar energy is not always produced at the time energy is needed most.
