

What was the Great Depression?

This installment of our Focus series presents an account of the Great Depression illustrated with selections from the numerous collections in the Artstor Digital Library that center on history. The Great Depression was the longest lasting and most severe period of low general economic activity and unemployment of the 20th century.

How did the Great Depression affect the world?

The Great Depression was the longest lasting and most severe period of low general economic activity and unemployment of the 20th century. Lasting approximately a decade, it devastated economies around the world, leaving as much as a third of the population in some countries without jobs, and slashing international trade by more than half.

What triggered the Great Depression?

The Great Depression was triggered by the Wall Street Crash of October 29, 1929 (also known as "Black Tuesday"). The crash ensued from a speculative boom that began in the late 1920s in which hundreds of thousands of Americans invested in the stock market, many of them with borrowed money.
