What is phase-out of a coal-powered station?

The phase-out of a coal-powered station is always gradual. It is measured with an indicator that represents the evolution of the installed capacity of the plant and provides evidence of its progressive phase-out. When the station ceases to operate, the corresponding capacity is subtracted from the balance sheet.

What happens when a power station ceases to operate?

When the station ceases to operate, the corresponding capacity is subtracted from the balance sheet. During the process of building a power station, this is the date in which the latter starts being paid for the electricity it produces. Commercial and industrial companies of medium or large size.
