

The low-altitude economy ultimately depends on energy storage

Is the low-altitude economy forming a new economic domain?

The low-altitude economy has huge growth potential, theoretically forming a new, expansive economic domain. The government has already signaled its commitment to develop the sector, for which the digital low-altitude economy network must be advanced, guiding the orderly progression of the low-altitude economy.

Can low-altitude economy revolutionize China's economy?

This shift is critical for advancing a new economic model -- the low-altitude economy -- which can revolutionize China's economy. The low-altitude economy, driven by cutting-edge technology, efficient operations and high-quality development, has immense potential, as it can be a powerful driver of China's high-quality growth and industrialization.

How can the management system transform the low-altitude economy?

The establishment of standards and rules by relevant national authorities, coupled with the delegation of authority to local governments at all levels, is an inevitable choice for the transformation of the management system in the future development of the low-altitude economy.

What is the low-altitude economy?

The low-altitude economy is poised to transform worldwide urban logistics, emergency response, and personal mobility paradigms. Realizing this potential requires global collaboration and shared responsibility for managing technological integration, regulatory harmonization, and infrastructure development.

What is the economic model of low-altitude flying?

As a key driver of new quality productive forces, it involves economic activities in airspace below 1,000 meters and extending to not more than 3,000 meters. This innovative economic model encompasses manned and unmanned low-altitude flying activities that have diverse applications, broad market potential and significant development opportunities.

Will the low-altitude economy create new jobs?

The low-altitude economy could create numerous new jobs. There is already a shortage of drone pilots in China, while thousands of people in the USA are being retrained to pilot the aircraft remotely. The United States does not want to be left behind by China when it comes to tapping into the booming market.
