Latent heat storage systems have high energy density and efficient heat transfer capability at constant temperature [30], [123]. Sensible heat storage systems are common, and widespread technologies have storage mediums that are solid (e.g., ground, cast iron or concrete) or liquid (e.g., water or thermo-oil) [30].

It is apparent that, because the transportation sector switches to electricity, the electric energy demand increases accordingly. Even with the increase electricity demand, the fast, global growth of electric vehicle (EV) fleets, has three beneficial effects for the reduction of CO₂ emissions: First, since electricity in most OECD countries is generated using a declining ...
