What is return?

Return ensures that no renewable energy goes to waste. We engage with local communities, environmental organizations, the media, and the public to drive a sustainable energy future and support the transition to independent power. Under one brand, we operate across multiple locations with a clear vision for Europe's energy future.

How does energy storage work?

Energy storage creates a buffer in the power system that can absorb any excess energy in periods when renewables produce more than is required. This stored energy is then sent back to the grid when supply is limited.
