FESS have been utilised in F1 as a temporary energy storage device since the rules were revised in 2009. Flybrid Systems was among the primary suppliers of such innovative flywheel energy storage solutions for F1 race cars [84]. Flywheels in motorsport undergo several charge/discharge cycles per minute, thus standby losses are not a huge concern.

Flywheel is a rotating mechanical device used to store kinetic energy. It usually has a significant rotating inertia, and thus resists a sudden change in the rotational speed (Bitterly 1998; Bolund et al. 2007). With the increasing problem in environment and energy, flywheel energy storage, as a special type of mechanical energy storage technology, has extensive ...
