The two power grids interpret the new energy storage policy

Shared energy storage is a new energy storage business model under the background of carbon peaking and carbon neutrality goals. The investors of the shared energy storage power station are multi-party capital, which can include local governments, private capital, power generation companies and other investment entities.

Power systems are undergoing a significant transformation around the globe. Renewable energy sources (RES) are replacing their conventional counterparts, leading to a variable, unpredictable, and distributed energy supply mix. The predominant forms of RES, wind, and solar photovoltaic (PV) require inverter-based resources (IBRs) that lack inherent ...

The cumulative investment in the construction of power grids accounts for roughly 36.2% of the total investment in the power sector. Though during 2001-2009 the share increased to 45%, it is still significantly below the international standard of 50-60% [12]. Presently, China (SGCC in particular) is advancing the strategy of "ultra-high voltage plus big coal power bases, ...
