What does an accumulator store in a hydraulic device?

In a hydraulic device, an accumulator stores hydraulic energy. It does this by storing hydraulic fluid under pressure, much like a car battery stores electrical energy. Accumulators come in various sizes and designs, with an initial gas pressure known as the 'precharge pressure'.

How do hydraulic accumulators reduce pump capacity requirements?

Hydraulic accumulators store hydraulic fluid under pressure to supplement pump flow and reduce pump capacity requirements, maintain pressure and minimize pressure fluctuations in closed systems absorb shocks, and provide auxiliary hydraulic power in an emergency.
