

Upgrade of after-sales service in energy storage industry

Will the energy storage industry thrive in the next stage?

The energy storage industry is going through a critical period of transition from the early commercial stage to development on a large scale. Whether it can thrive in the next stage depends on its economics.

Why are energy storage technologies important?

They are also strategically important for international competition. KPMG China and the Electric Transportation & Energy Storage Association of the China Electricity Council ('CEC') released the New Energy Storage Technologies Empower Energy Transition report at the 2023 China International Energy Storage Conference.

What is the after sale maintenance framework?

The after sale maintenance framework thereby provides information on the return on investment of Industry 4.0 for machinery, through the after sale maintenance service, which is of particular interest for a firm's business outlook (e.g., funds spent vs. funds generated). There follows a description of each one of the model's eight phases.

What are industrial after sale services?

The information generated would then open the door to other types of industrial after sale services for the entire pool of machines sold, which may constitute major sources of recurring income and reinforce customer loyalty for the future sale of machinery, e.g., availability contracts, retrofitting of machines, and renting and leasing contracts.

What is the implementation plan for the development of new energy storage?

In January 2022, the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the Development of New Energy Storage during the 14th Five-Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system.

How many electrochemical storage stations are there in 2022?

In 2022, 194 electrochemical storage stations were put into operation, with a total stored energy of 7.9GWh. These accounted for 60.2% of the total energy stored by stations in operation, a year-on-year increase of 176% (Figure 4).
