

How can NREL develop transformative energy storage solutions?

To develop transformative energy storage solutions, system-level needs must drive basic science and research. Learn more about our energy storage research projects. NREL's energy storage research is funded by the U.S. Department of Energy and industry partnerships.

What is the future of energy storage?

"Meeting the rising demand for advanced and sustainable energy storage solutions is paramount, especially for heavy-duty transportation and the electric grid. Unlocking unprecedented performance beyond current lithium-ion technology is crucial. Our path forward rests in robust research, firmly rooted in fundamental science."

What is Berkeley Lab's energy storage center?

Building on its history of scientific leadership in energy storage research, Berkeley Lab's Energy Storage Center works with national lab, academic, and industry partners to enable affordable and resilient energy, and advance solutions for buildings and the evolving grid, transportation, and industrial sectors.

Why is energy storage important?

With variable energy resources comprising a larger mix of energy generation, storage has the potential to smooth power supply and support the transition to renewable energy. The ESIF provides an unmatched research space to explore energy storage pathways at the intersection of technologies and domains.

What is the energy storage Grand Challenge?

Energy Storage Grand Challenge: Increasing America's global leadership in energy storage through a DOE-wide effort led by OE and EERE to develop, commercialize, and use next-generation technologies.

What is energy storage technology RD&D?

OE's development of innovative tools improves storage reliability and safety, analysis, and performance validation. Energy Storage Technology RD&D: Improving performance characteristics, characterizing novel materials, reducing costs, ensuring safety and reliability, and uncovering community benefits.

A prototype for synthesis of new on-board hydrogen storage materials (HSMs) has been developed by our team. The hydrogen storage capacity of HSMs have been improved by optimizing the preparation and purification procedures and ...

A Circular Economy for Lithium-Ion Batteries Used in Mobile and Stationary Energy Storage: Drivers, Barriers, Enablers, and U.S. Policy Considerations, NREL Technical Report (2021) Impacts of Solvent Washing on the Electrochemical Remediation of Commercial End-Of-Life Cathodes, ACS Applied Energy Materials (2020) Contact

CER is engaged in energy storage research, and also studies the process of delivering the energy through the microgrid (distribution system) once it's needed. ... Contact Us. P: (858) 534-6196 F: (858) 534-7716. Hours: ...

Electrochemical Energy Conversion Research Group, led by prof. Tanja Kallio, investigates and develops materials and devices for electrochemical energy conversion and storage. The group's main research areas are: Electrochemical energy conversion materials and devices; in particular electrocatalysts and electrode materials for such applications ...

Argonne leads the newly-launched Low-cost Earth-abundant Na-ion Storage (LENS) Consortium, which aims to develop safe, inexpensive, and long-lasting sodium-ion batteries that are made from U.S. abundant materials.If ...

Electrochemical Energy Storage Efforts. We are a multidisciplinary team of world-renowned researchers developing advanced energy storage technologies in support of DOE goals, sponsors, and US industry. We have ...

An Oregon State University research group has developed a zinc metal anode electrolyte that raises the efficiency of zinc battery cells to nearly 100%, a breakthrough as companies scramble to find non-lithium-ion ...

NREL's energy storage research spans a range of applications and technologies. NREL's electrochemical storage research ranges from materials discovery and development ...

Electrochemical energy storage becomes more and more important in the context of next generation power grid, home storage, electric transportation and well-established applications such as power tools and portable devices. Our research is focused on developing materials and technologies for energy storage in batteries and related devices.

Energy Storage is becoming an integral part of the energy transition landscape across the globe. Under the auspices of US-India Strategic Clean Energy Partnership, US-DoE and India Energy Storage Alliance (IESA) ...

Energy Storage Technologies for Electric Grid Modernization A secure, robust, and agile electricity grid is a central element of national infrastructure. Modernization of this infrastructure is critical for the nation's economic vitality. ...

× Martin Freer CEO. Professor Martin Freer joined the Faraday Institution as CEO in September 2024. Professor Freer is a nuclear physicist. Between 2015 and 2024 he served as the Director of the Birmingham Energy Institute (BEI) at the ...

The research group of Battery Materials and Technologies, led by associate professor Pekka Peljo, is developing next generation stationary energy storage ...

According to the Q2 2024 edition of the US Energy Storage Monitor report by research group Wood Mackenzie, published in partnership with the American Clean Power Association (ACP), this represented an 84% rise ...

Prof. Craig Buckley, leads the HSRG and has over 30 years experience in hydrogen storage research. Craig is the Australian executive committee member for the International Energy Agency (IEA) Hydrogen Technology Collaboration ...

The goal of the Laboratory for Energy Storage and Conversion (LESC), at the University of California San Diego Nanoengineering department, is to design and develop new functional nano-materials and nano-structures for ...

The University of Illinois is developing the next generation of energy storage devices through research in engineering and science. These efforts focus on storing renewable energy on ...

We spearhead collaborative research to revolutionize energy storage technologies for a sustainable and electrified future. ESRA unites leading experts from national labs and ...

NUS Centre for Energy Research & Technology College of Design and Engineering National University of Singapore Block E1, #05-15, 3 Engineering Drive 2, Singapore 117578 +65 6601 6135

SCALAR is an Energy Frontier Research Center (EFRC) made up of 17 PIs from 6 universities and institutions. mission. To design materials, interfaces, and architectures that revolutionize the performance of energy storage systems by ...

The Energy Technologies Area's Energy Storage Group conducts innovative research to understand the basic science of, as well as overcome technological barriers to next-generation batteries. ... Funded primarily by the ...

Energy storage research at the Energy Systems Integration Facility (ESIF) is focused on solutions that maximize efficiency and value for a variety of energy storage ...

The study of the development, application, socio-economic and environmental impact of materials and systems which store energy for later use. This research area covers electrochemical, thermal, mechanical, kinetic and hybrid energy storage, as well as research into integrating energy storage into and with renewable energy sources and power networks.

Reducing electric vehicle range anxiety with machine learning models incorporating human behavior

(preprint, March 2025); Assessing cathode-electrolyte interphases in batteries (Nature Energy, October 2024);
...

Our charter is the development and understanding of next generation energy storage materials and energy storage devices. Batteries are extremely complex devices with ...

The Thermal Energy Storage Group conducts research on the development, demonstration and deployment of cost-effective, integrated energy storage technologies for building applications. Research focuses on new ...

The U.S. Department of Energy (DOE) announced its decision to renew the Joint Center for Energy Storage Research (JCESR), a DOE Energy Innovation Hub led by Argonne National Laboratory and focused on advancing ...

Batteries are one of the biggest topics of Stanford energy research. Scientists and engineers are testing a wide variety of promising, low-cost battery materials, including lithium-metal, nickel-iron and aluminum. ... including lithium-metal, nickel-iron and aluminum. Several labs are also working to improve solid oxide storage devices ...

The U.S. Department of Energy (DOE) awarded Case Western Reserve University \$10.75 million over four years to establish a research center to explore Breakthrough Electrolytes for Energy Storage (BEES), with the intent of identifying new battery chemistries with the potential to provide large, long-lasting energy storage solutions for buildings ...

The clean energy transition is demanding more from electrochemical energy storage systems than ever before. The growing popularity of electric vehicles requires greater energy and power ...

We are enhancing scientific knowledge and engineering methodologies to accelerate development of novel electrical energy storage technologies that enable efficient, cost ...

To develop transformative energy storage solutions, system-level needs must drive basic science and research. Learn more about our energy storage research projects. ...
