Can thermal energy storage with phase change materials be used for cold storage?

We propose the use of cold thermal energy storage method with phase change materials for cold storage to address these issues. Thermal energy storage (TES) with phase change materials (PCMs) has several advantages including large energy density [18, 19] and constant temperature during the phase transition [20, 21].

How does cold energy storage work?

Cold energy storage methods store the cold energy in PCM by electrical energy which releases energy in the daytime and charges in the night time when the electricity is cheaper than in the daytime, resulting in an overall lower cost .,

What is the cooling performance of a PCM-based cold thermal energy storage box?

Melting points of the PCMs varies the box cooling time from 2.1 to 9.6 h. The vacuum insulated panel can prolong the cooling time of the box to 46.5 h. Cooling performance of a portable box integrating with phase change material (PCM)-based cold thermal energy storage (TES) modules was studied and reported in this paper.

What is discharging depth in thermal energy storage based cold box?

The discharging depth is defined as the ratio of energy released for cooling the interior to the energy stored in the device, can be used as an indicator for the optimization of the thermal energy storage based cold box. In this work, the liquid fraction of the PCMs inside the cold plates is used to represent the discharging depth.

Is cold thermal energy storage a good option?

Policies and ethics Cold thermal energy storage (TES) has been an active research area over the past few decades for it can be a good option for mitigating the effects of intermittent renewable resources on the networks, and providing flexibility and ancillary services for managing...

What is the structure of a cold storage box?

The structure of the box is cuboid. To avoid products chilling injury from the cold storage plate, the space can be divided into a fresh-keeping area and a cold-storage area with an adjustment plate. The performance of the cold energy release is an essential evaluating indicator for the box, which is affected by many factors.

In this paper, a test was conducted to investigate the effects of HTA, APOR and AOP on temperature elevating rate and temperature standard deviation to assess the cold ...

About Refrigeration . Refrigeration is a key part of modern society, whether to ensure a comfortable climate in our homes and offices by air-conditioning or to keep our food cold to preserve its quality and reduce waste. ...

Liquefied natural gas (LNG) is widely used in many countries around the world primarily as a mode of transport for natural gas. However, massive amount of energy (around 830 kJ/kg of LNG) is wasted during the regasification process in the LNG regasification terminals. Therefore, the technologies to utilize the LNG cold energy have received significant attention ...

Energy storage technologies include sensible and latent heat storage. As an important latent heat storage method, phase change cold storage has the effect of shifting peaks and filling valleys and improving energy efficiency, especially for cold chain logistics [6], air conditioning [7], building energy saving [8], intelligent temperature control of human body [9] ...

Su et al. [21] reviewed the solid-liquid-phase change materials used in thermal energy storage, as well as their packaging technology and housing materials. Li et al. [101] introduced air conditioners with cold storage, classified research on various cold storage technologies or applications, and introduced in detail these cold storage technologies and ...

The energy efficiency of cold storage devices depends primarily on the selection of cold storage materials, which is crucial for ensuring effective cold storage [25, 26]. Typically, cold chain transportation implemented by cold storage includes three main parts: pre-cooling, refrigeration, and refrigerated transport [27]. Among them, refrigerated transport is crucial, ...

The COVID-19 outbreak has presented new challenges for the cold chain logistics involved in vaccine distribution. To ensure the safe storage and transportation of vaccines while maintaining the required temperature range, this study focuses on investigating the cooling performance of vaccine cold storage boxes integrated with phase change material (PCM) bottles.

The cold storage plates were arranged with spacing of 10 mm, 20 mm, and 30 mm and the inlet velocity was fixed at 2.4 m/s. The effect of different cold storage plate spacings on cold energy release in the storage area was analyzed in this study, as depicted in Fig. 11. Increasing the spacing between cold storage plates results in a lower outlet ...
