

What is energy storage capacity?

It is usually measured in watts (W). The energy storage capacity of a storage system,  $E$ , is the maximum amount of energy that it can store and release. It is often measured in watt-hours (Wh). A bathtub, for example, is a storage system for water. Its "power" would be the maximum rate at which the spigot and drain can let water flow in and out.

What is the power of a storage system?

The power of a storage system,  $P$ , is the rate at which energy flows through it, in or out. It is usually measured in watts (W). The energy storage capacity of a storage system,  $E$ , is the maximum amount of energy that it can store and release. It is often measured in watt-hours (Wh). A bathtub, for example, is a storage system for water.

Why is energy storage important?
