To satisfy the demanding requirements of electric vehicle applications such as increased efficiency,cost-effectiveness,longer cycle life,and energy density. This article takes a close look at both traditional and innovative battery technologies.

Are electrochemical batteries suitable for movable or electric vehicle applications?

Among different energy storing technology, electrochemical batteries are proven to be versatileone for movable or electric vehicle applications. Various operating performance parameter of different batteries are analysed through radar based specified diagram technique as shown in Fig. 12.

Can lithium-ion battery be used for energy storage in EVs?

Lithium-ion batteries are commonly used for energy storage in Electric Vehicles (EVs)due to their technical and economic features [6]. However,one of the challenges for commercialization of EVs is an appropriate energy storage system that can support high mileage,fast charging,and high-performance driving [7][8][9].

Which battery chemistries should be developed in the long term?

Considering the theoretical specific energy limitation (350-400 Wh kg -1) of such battery systems, it is highly imperative for developing new higher energy battery chemistries in the long term (beyond 2025) such as SSBs (e.g., NMC-811/SSE/Li, LNMO/SSE/Li), Li-S, Li-air batteries.

Why is nickel based battery technology a good choice for electric vehicles?

Nickel-based battery technology also has a good impact on electric vehicles as a source of energy. Lead-acid battery technology have low cost while this technology has harmful impacts on the environment and low specific energy density as compared to other battery technology.

Are lithium-ion batteries suitable for EV applications?

A comparison and evaluation of different energy storage technologies indicates that lithium-ion batteries are preferred for EV applicationsmainly due to energy balance and energy efficiency. Supercapacitors are often used with batteries to meet high demand for energy, and FCs are promising for long-haul and commercial vehicle applications.
