# What is the price of clean energy storage for electric vehicles

With fifty percent of the world"s energy-related atmospheric carbon (greenhouse gas) emissions in 2050 expected to be generated by the transportation sector alone, a solid need to shift to a cleaner, lower-carbon-emitting alternative such as electric vehicles (EVs) is felt by both government and business (Zarate, 2015).

The need for green energy and minimization of emissions has pushed automakers to cleaner transportation means. Electric vehicles market share is increasing annually at a high rate and is expected ...

Norway is the best example to that, because it shows a low electricity cost (0.1355 EUR/kWh) and high fuel cost 1.602 EUR/L, and 98% of renewable energy source, the country presents the higher BEV sell vehicles of the world, based on the reduction of taxes on BEV acquisition and high incentives for BEV user.
