What is the principle of Flywheel energy storage?

Principle of Flywheel Energy Storage: A flywheel is a rotating disk or cylinder that stores kinetic energy. When energy is input into the flywheel, it starts spinning, and the kinetic energy is stored in the form of rotational motion.

What is a flywheel energy storage system (fess)?

Think of it as a mechanical storage tool that converts electrical energy into mechanical energy for storage. This energy is stored in the form of rotational kinetic energy. Typically,the energy input to a Flywheel Energy Storage System (FESS) comes from an electrical source like the grid or any other electrical source.

What is the operational mechanism of a flywheel?

The operational mechanism of a flywheel has two states: energy storage and energy release. Energy is stored in a flywheel when torque is applied to it. The torque increases the rotational speed of the flywheel; as a result, energy is stored. Conversely, the energy is released in the form of torque to the connected mechanical device .

What is the kinetic energy stored in a flywheel?

The kinetic energy stored in the flywheel is presented in Eq. (1). where is the stored energy, is the moment of inertia, is the rotational speed. The speed of the flywheel undergoes the state of charge, increasing during the energy storage stored and decreasing when discharges.

What is the function of a flywheel?

The basic function of the flywheel is to convert the mechanical energy for the end-use application, which is electrical energy. For this conversion, an electromechanical machine is required which could be a motor/generator set. Generator and motor: When the kinetic energy is being stored, the motor is used to drive the flywheel.

Which method is used in flywheel energy storage system?

Another method used in flywheel energy storage systems is to store energy with high speed. In this method the rotating object is rotated up to 100,000 rpm. The rotating object weight is low in this method. This method is used in small applications in terms of volume and weight.
