What is pumped-storage energy storage?

Pumped-storage is a common type of energy storage. Hydroelectric power is generally used to store excess grid power. Electricity from the grid is often used to pump water up into a tank or lake when demand is low. Water is permitted to flow from an upper reservoir to a lower reservoir when demand spikes.

What type of energy storage is used to start a diesel generator?

A pressurized air tank employed to start a diesel generator (Reference: wikipedia.org) Pumped-storage is a common type of energy storage. Hydroelectric power is generally used to store excess grid power. Electricity from the grid is often used to pump water up into a tank or lake when demand is low.
