What are the different types of energy storage policy?

Approximately 16 states have adopted some form of energy storage policy, which broadly fall into the following categories: procurement targets, regulatory adaption, demonstration programs, financial incentives, and consumer protections. Below we give an overview of each of these energy storage policy categories.

What are energy storage policy tools?

In general, policies are designed to establish boundaries and provide regulatory guidelines. According to the Energy Storage Association (ESA), the policy tools fall under three categories which are value, access and competition.

Does state energy storage policy matter?

While decisions carried out by federal regulators and regional market operators have an impact on state energy storage policy, state policymakers--and state legislators in particular--are instrumental in enacting policies that remove barriers to adoption and encourage investment in storage technologies.

What is a storage policy?

All of the states with a storage policy in place have a renewable portfolio standard or a nonbinding renewable energy goal. Regulatory changes can broaden competitive access to storage such as by updating resource planning requirements or permitting storage through rate proceedings.

How do ESS policies promote energy storage?

ESS policies mostly promote energy storage by providing incentives, soft loans, targets and a level playing field. Nevertheless, a relatively small number of countries around the world have implemented the ESS policies.

What are the different types of energy storage systems?

Energy storage systems (ESS) have been around for a long time with the earliest and most popular form being the Pumped Hydro Storage. Other forms of ESS are compressed air, flywheel, super-capacitor and battery.

ESS policies have been proposed in some countries to support the renewable energy integration and grid stability. These policies are mostly concentrated around battery ...

Energy storage systems benefit from the connection privilege for RES plants to the public grid. Electricity stored in a storage system qualifies for the feed-in premium (Marktprämie), which is granted to the plant operator under the Renewables Act 2017 (EEG 2017) once the electricity is fed into the public grid. A specific provision of the EEG 2017 ensures that the EEG surcharge is ...
