Express delivery services are booming in both developed and emerging economies due to their low cost, convenience, and the fast growth in online shopping.

How will express delivery packaging change in 2022?

By 2022, laws and regulations regarding the express delivery packaging field will be further refined, and an incentive and restraint mechanism for package management will take shape, according to the document.

What is express delivery?

Express delivery is a delivery service for both intracity and intercity parcels. It is relatively independent from the national postal service, with dedicated sorting, warehousing, and delivery processes, as well as independent equipment, facilities, delivery channels, and personnel.

Will China promote a green revolution in express delivery packaging?

The collection and disposal of packaging waste should also be standardized, and technologies such as intelligent packaging and separation of tape from cartons should be adopted. China will promote a green revolution in express delivery packaging, according to a newly released document.

In the shaking table test, test specimens are placed on the table and it is fixed by mechanical fastener or artificial soil compacted on the table. Then the structure will experience a shaking process at a certain frequency values until a certain time limit set by the operator. The earthquake simulator or shaking table has a wide range

Renewable-energy storage can help humanity reduce its fossil fuel use and combat climate change. Here are some of the best and most promising methods for storing renewable energy.

Shaking Up to Heat Up Temperature Changes in a Shaken, not Stirred, Liquid In this activity students will vigorously shake a container of water, converting some of the potential chemical energy stored in their bodies into kinetic energy, which is the energy of motion. This kinetic energy is transferred to the water.
