How does a geothermal power plant work?

Figure 1. Geothermal power plant (flash steam, combined cycle) in Iceland. Geothermal power plants are used in order to generate electricity by the use of geothermal energy (the Earth's internal thermal energy). They essentially work the same as a coal or nuclear power plant, the main difference being the heat source.

What is geothermal power plant working principle?

This type of Geothermal Power Plant Working Principle is more attractive, because one cubic mile of hot rock when it cooled from 350°C to 180°C, it will give energy of a major oil field, about (1/3) billion barrel of oils and it could yield about 8000 MW - year of energy. 4. Magmatic molten chamber systems

What are the advantages of geothermal power plant?
