

Are lithium-sulfur batteries a good energy storage device?

Lithium-sulfur (Li-S) batteries are promising energy-storage devices because of their high theoretical energy densities. However, the practical application of Li-S batteries is still impeded by the poor cycling performance and rate capability at practical conditions.

Is photoassisted charging a viable solution for non-aqueous Li-O₂ batteries?

This concept of 'photoassisted charging process' offers a novel strategy to address the overpotential issue of non-aqueous Li-O₂ batteries and also a distinct approach for integrating solar cells and batteries 15,16,17,18. Figure 1a shows the structure of the device, named as solar battery, in this work.

Is a non-aqueous rechargeable lithium-oxygen battery a promising next-generation energy storage technique?

Nature Communications 5, Article number: 5111 (2014) Cite this article With a high theoretical specific energy, the non-aqueous rechargeable lithium-oxygen battery is a promising next-generation energy storage technique.

Does a redox shuttle facilitate oxygen reduction in a lithium air battery?

A redox shuttle to facilitate oxygen reduction in the lithium air battery. Electrochem. Commun. 26, 74-76 (2013). Amine, K., Chen, Z. & Wang, Q. Redox shuttles for overcharge protection of lithium batteries.

What redox couple for TiO₂ solar cells?

For dye-sensitized TiO₂ solar cells, the triiodide/iodide (I³⁻/I⁻) redox couple is a benchmark electrolyte for the dye regeneration 24. Despite being mentioned in a patent 12 and a very recent publication 14, not much attention has been placed on utilizing I³⁻/I⁻ redox couple for non-aqueous Li-O₂ batteries.

What are the charging curves of a Li-O₂ battery?

The charging curves of a simple Li-O₂ battery, the Li-O₂ battery with LiI redox shuttle and the solar battery at a current density of (a) 0.016 mA cm⁻² and (b) 0.032 mA cm⁻². The LiI redox shuttle and photoelectrode significantly reduces the battery charging voltage.

An "all-in-one" mesh typed integrated energy unit is developed which converts solar energy to electric energy and stores it simultaneously. The entire integrated device operates in uniform electrolyte system which contains 0.8 M ...

This paper has previewed the latest representative finding of photo/electrocatalytic coupling reactions on energy conversion and storage, especially for oxygen evolution reaction ...

Considering the market demand for lithium-ion batteries (LIBs) and sodium-ion batteries (SIBs) as energy storage devices, it is necessary to find a negative electrode material with low cost ...

Efficient Bifunctional Photoelectric Integrated Cathode for Solar Energy Conversion and Storage. ACS Nano 2023, 17 ... Ming Xu, Jianmin Gu, Zixun Fang, Yu Li, Xing Wang, Xiaoyu Zhao, Tifeng Jiao, Wei Wang. ... Metal Halide ...

The development of solar energy storage strategies is a key step for handling the inherent variability of sunlight within a global solar-based energy model. In the present study, we have developed a photocapacitive device based on the heterostructured BiVO₄-PbO_x system. BiVO₄ provides the photoactive core of the device, while PbO_x nanoparticles (formed by the ...

Electrochemical Energy Reviews >> 2022, Vol. 5 >> Issue (2): 263-311. doi: 10.1007/s41918-021-00098-3. Previous Articles Next Articles . Perovskite Cathode Materials for Low-Temperature Solid Oxide Fuel Cells: Fundamentals to Optimization Zhiheng ...

Photo-rechargeable energy storage devices pave a new way for directly utilizing solar energy, and therefore, the design and assembly of photo-assisted supercapacitors in order to realize the efficient storage of solar ...

Postdoctoral Researcher at University of California, Santa Barbara · o Hands-on experience and in-depth knowledge of organic and inorganic semiconducting materials and devices. o Knowledge ...

Yu li photoelectric energy storage in integrated energy modules for self-charging. Within these integrated energy modules, the photoelectric storage efficiency (PSE) is a crucial property for continuous power supply to electronic devices. The lithium-oxygen (Li-O₂) batteries are recently attracting increasing research attention because of their

Energy Storage Materials 15, 148-170, 2018 310 2018 Regulating Li deposition by constructing LiF-rich host for dendrite-free lithium metal anode Y Yuan, F Wu, Y Bai, Y Li, G Chen, Z ...

1 Introduction. The dwindling supply of non-renewable fossil fuels presents a significant challenge in meeting the ever-increasing energy demands. [] Consequently, there is a growing pursuit of renewable energy sources to achieve a green, low-carbon, and circular economy. [] Solar energy emerges as a promising alternative owing to its environmentally ...

Photo-rechargeable energy storage devices pave a new way for directly utilizing solar energy, and therefore, the design and assembly of photo-assisted supercapacitors in order to realize the efficient storage of solar energy become increasingly important.

Treating the ends of the nanotube wire with a light-sensitive dye and an electrolyte, creates photoelectric-conversion and energy-storage regions in the same device (see ...
