Owing to their high energy density and long cycling life, rechargeable lithium-ion batteries (LIBs) emerge as the most promising electrochemical energy storage devices beyond conventional lead-acid, nickel ...

Zheng's research interests include flexible/stretchable/wearable electronics, nanofabrication, surface chemistry, polymer science, energy conversion and storage. Academic and Professional Experience

QAES signed agreements with Chongqing Zijian Electronics Co., Ltd. and Chongqing GCL Energy Co., Ltd. for a 1.7MW/3.4MWh storage project and a 50MW/100MWh energy storage station project, respectively. QingAn Energy Storage's 200kWh distributed energy storage system, which holds 69 patents, has been successfully implemented across various ...

Batteries are among the most important energy storage technologies in our modern civilization, which play a crucial role in portable electronics, electric vehicles, renewable energy storage, grid storage, etc. [1] particular, the complete electrification of transportations is placing new demands for advanced batteries, requiring them to exhibit high energy density, high cycle life, ...

Dr. Yuanjing Lin currently serves as an Assistant Professor in School of Microelectronics, Southern University of Science and Technology. Her research interests mainly focus on using nanostructured materials and novel fabrication techniques to realize printable and wearable electrochemical sensors, energy storage devices for their applications in intelligent self ...

High-performance supercapacitors (SCs) are important energy storage components for emerging wearable electronics. Rendering low-temperature foldability to SCs is critically important when ...

Zhi-Mei Yang #; Yaoda Wang #; Meng-Hang Zhang; Zhe-Yuan Hou; Shu-Peng Zhao; Xiao Han; Shuai Yuan; Jian Su*; Zhong Jin*; Jing-Lin Zuo*; Electroactive tetrathiafulvalene-based covalent organic framework with thiophene units as anode for high-performance hybrid lithium-ion capacitors Dedicated to Professor Hong-Cai

Zhou on the occasion of his 60th ...

Advanced Ceramics for Aerospace Applications; Photoelectric Energy Conversion and Storage Materials; New Energy Materials for High Performance Supercapacitor: 86-571-87951234; hong_zhanglian@zju .cn: Hong Zijian

As one of the three major electrical energy storage devices, dielectric containers have the advantages of high-power density, fast charging and discharging, wide operating temperature range, long cycle time, and low environmental pollution, etc. [].With the rapid development of electronic equipment, the applications of dielectric containers in dielectric ...

? : ;? : ???,???? ...

As a new 2-dimensional material, borophene is expected to be used in energy storage devices because of its unique electronic properties. However, its utilization in rechargeable aluminum batteries (RABs) is limited by high valence of Al (3s 2 3p 1). Namely, the Al adsorption borophene is too weak to carry on a multielectron reaction.

We focus on tailoring the surface properties and functionalities by manipulating the surface topography and chemistry. The approaches are multidisciplinary, involving expertise and ...

His research focuses on clean and efficient energy-storage materials (lithium metal batteries, solid-state batteries, etc.), biomaterials for sustainable energy storage, and ultrafast synthesis of energy-related ...

Zijian Electronics announced that it intends to increase the capital of Shenzhen Weiduli by RMB 49.5 million in cash, with the source of the capital being the company""s own funds. It will be ...

Zijian Electronic Energy Storage Battery is recognized for its innovative technology, superior efficiency, extensive applications, and commitment to sustainability. 1. ...

Prof. Zijian Zheng is currently Full Professor at the Institute of Textile and Clothing (ITC), Associate Director of Research Institute for Intelligent Wearable Systems, Lead Investigator of Research Institute for Smart Energy (RISE) at The Hong Kong Polytechnic University. His research interests include surface and polymer science, nanofabrication, flexible and wearable ...

polymer science, surface science, flexible and wearable electronics, energy conversion and storage, smart materials, nanofabrication

These devices not only exhibit excellent energy storage performance but also visually indicate the status of energy storage and consumption through the color change of electrode materials [4], [5]. The integration of energy storage and display functionalities obviously minimizes the dimension of electronic devices, enhances the integration of ...

Under the "Dual Carbon" target, the high proportion of variable energy has become the inevitable trend of power system, which puts higher requirements on system flexibility [1]. Energy storage (ES) resources can improve the system's power balance ability, transform the original point balance into surface balance, and have important significance for ensuring the ...

Wang, et al. Pricing method of electric-thermal heterogeneous shared energy storage[J]. Energy, 2023: 128275. ... Xia Yuanxing, et al. A two-stage robust optimal configuration model of generation-side cloud energy ...

In order to enhance the heat exchange rate between the heat transfer fluid and the phase change material (PCM), the placement of fins in the latent heat thermal energy storage (LHTES) unit is an effective means. To this end, this paper introduces a novel fin structure that can evolve along the optimization process using a topology optimization strategy, aiming to ...

Mingyu Liu, Sheng Chen, Hongwei Zhu, Zijian Zhou, Jingying Xu. Article 128358 View PDF. Article preview. ... Mobile energy storage systems with spatial-temporal flexibility for post-disaster recovery of power distribution systems: A bilevel optimization approach ... Analysis of real-time energy losses of electric vehicle caused by non ...

Project Title: Pilot and Mass Production of Next-Generation Composite Current Collectors for Mobility and Energy Storage Batteries (New Materials and New Energy)

His research interests are surface and polymer science, nanofabrication, flexible and wearable electronics, energy conversion and storage. Prof. Zheng received his B. Eng. in Chemical Engineering at ...
